

AltaPay & Magento Installation Guide

AltaPay has made it much easier for you as merchant/developer to receive secure payments in your Magento web shop. AltaPay is fully integrated with Magento via a plug-in. All you have to do is to install the plug-in, which will only take a few minutes to complete.

We will show you how to complete the installation through a step-by-step guide. Follow this guide to start accepting payments globally.

To make the set-up as smooth as possible for you, this installation guide is divided into following sections:

<u>1. PREREQUISITES</u>	2
<u>2. INSTALL THE PLUG-IN</u>	2
<u>3. CONFIGURATION OF ALTAPAY BUNDLE</u>	2
<u>4. CUSTOMIZATION</u>	3
<u>5. SUPPORTED FUNCTIONALITIES</u>	3
<u>6. CHANGE LOG</u>	3

1. Prerequisites

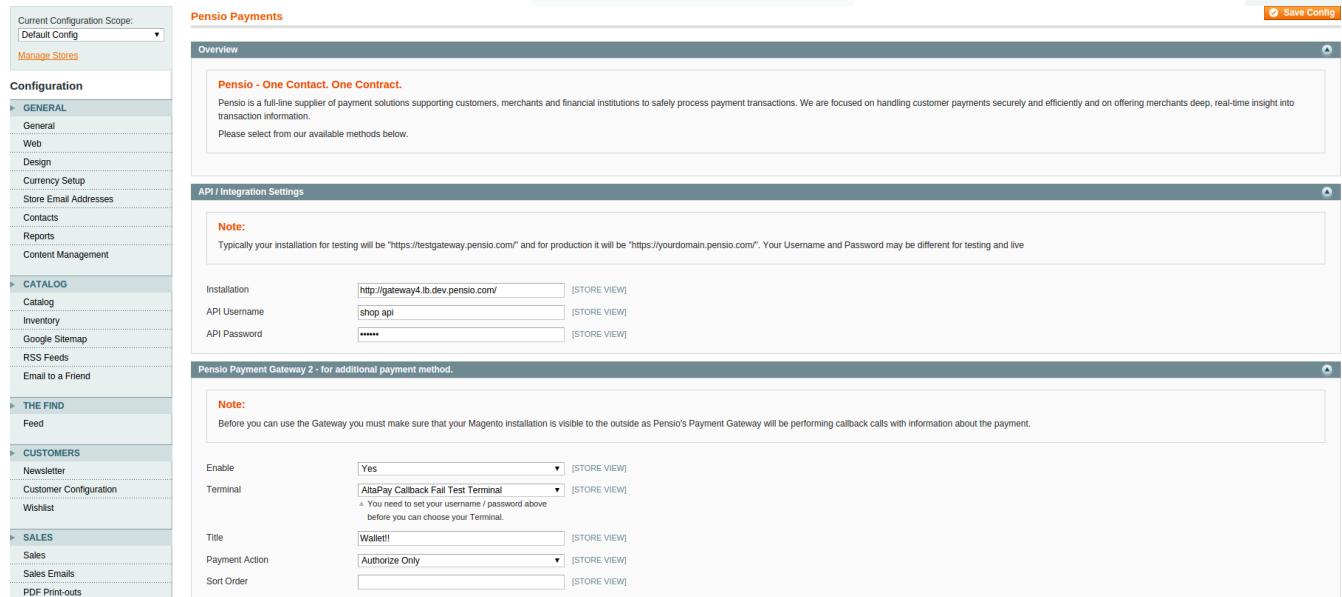

We highly recommend to gather all the below information before starting the installation.

1. Prerequisites for configuration the plug-in. AltaPay provide these.
 - a. AltaPay credentials and gateway information
 - i. Username
 - ii. Password
 - iii. Terminal
 - iv. Gateway
2. Prerequisites for fraud detection
 - a. Agreement with external fraud partner such as ACI ReD or MaxMind. Be aware that only 'Accept' and 'Decline' recommendations are accepted. The fraud detection is enabled on the terminal by AltaPay.

2. Install the plug-in

Install the plug-in by extracting it into the root folder of your Magento installation.

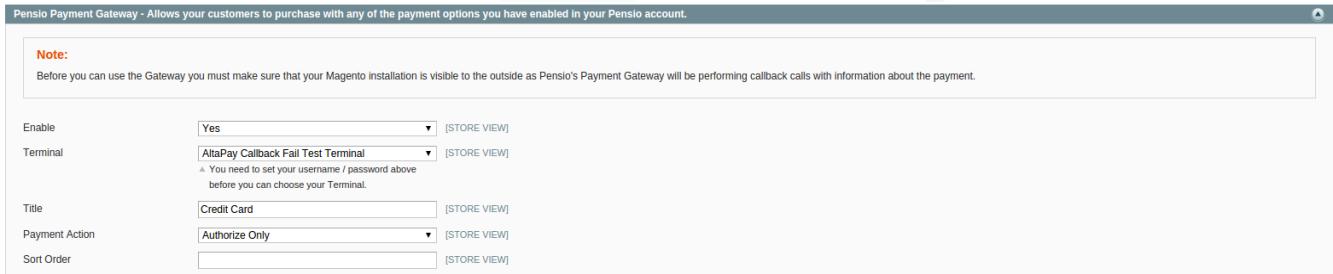

3. Configuration of AltaPay bundle

The screenshot shows the 'Pensio Payments' configuration page in the Magento Admin Panel. The left sidebar shows the current configuration scope as 'Default Config' and lists various sections: Configuration (General, Web, Design, Currency Setup, etc.), Catalog (Catalog, Inventory, Google Sitemap, RSS Feeds), THE FIND (Feed), CUSTOMERS (Newsletter, Customer Configuration, Wishlist), and SALES (Sales, Sales Emails, PDF Print-outs). The main content area has three tabs: Overview, API / Integration Settings, and Pensio Payment Gateway 2 - for additional payment method. The 'Overview' tab contains a note about Pensio being a full-line supplier of payment solutions and a section for selecting available methods. The 'API / Integration Settings' tab contains fields for Installation URL (http://gateway4.lb.dev.pensio.com/), API Username (shop api), and API Password (*****). It also includes a note about testing vs production URLs and liveUsername/livePassword. The 'Pensio Payment Gateway 2' tab contains fields for Enable (Yes), Terminal (AltaPay Callback Fail Test Terminal), Title (Wallet!), Payment Action (Authorize Only), and Sort Order (empty). A 'Save Config' button is located at the top right of the main content area.

1. Go to: System → Configuration → Pensio (If you get a 404 error, please flush your cache and logout and in again).
2. Define the gateway URL, username and password (URL for test environment is <https://testgateway.altapaysecure.com>).
3. Save the config to have the plug-in to pull a list of available terminals

4. For each of the Gateway groups, you have the following options:

Pensio Payment Gateway - Allows your customers to purchase with any of the payment options you have enabled in your Pensio account.

Note:
Before you can use the Gateway you must make sure that your Magento installation is visible to the outside as Pensio's Payment Gateway will be performing callback calls with information about the payment.

Enable	Yes	[STORE VIEW]
Terminal	Alta-Pay Callback Fail Test Terminal	[STORE VIEW]
▲ You need to set your username / password above before you can choose your Terminal.		
Title	Credit Card	[STORE VIEW]
Payment Action	Authorize Only	[STORE VIEW]
Sort Order		[STORE VIEW]

- Enable = Enable the payment method in the checkout
- Terminal = Here you select the appropriate terminal
- Title = Define the title shown in the checkout (this will not affect the name used other places, e.g. the e-mail send to customers)
- Payment Action = Here you define if only an authorization should take place, or if the transaction should be captured immediately
- Sort Order - Defines the order in which the payment methods are listed in checkout

Save the file and make sure the Application-xxxx.js and current.js files have been regenerated

4. Customization

It is possible to customize various aspects of the plug-in. Below is a list with the most relevant files:

- Render the payment page
app/design/frontend/base/default/template/pensio/checkout/form.phtml
- Style the payment form
app/design/frontend/base/default/template/pensio/checkout/magento_styling.css
- Display a failed page to the customer
app/design/frontend/base/default/template/pensio/checkout/failed.phtml
- Define what is stated as the payment method in the consumer's e-mail
app/design/frontend/base/default/template/pensio/payment/info/gateway.phtml

5. Supported functionalities

Supported functionalities:

- Use of Magento shop layout on payment pages
- Support for scopes
- Order-ID is pre-assigned when customer is sent to the gateway
- The basket is only converted to an order when the payment is successful
- Pending state for various payment methods

Feel free to contact our support team (support@altapay.com) if you need any assistance during the installation process or have questions regarding specific payment methods and functionalities.

6. Change log
